

<https://www.freecodecamp.org/news/best-practices-for-react/>

**What are some React best practices not covered in this week's videos? List at least 3 and describe why they are important.**

1. Good folder structure helps keep things organized. It can change depending on app size, but is very useful.
2. Learning different component patterns helps you in knowing what pattern to use where. Making you a more efficient developer.
3. Code splitting or lazy loading helps you in making parts of code accessible without having to go through the entire app to get there. This makes the app load faster and more usable.

**What is a highlight of what you have learned this week?**

I liked learning about functional components and how they can be used. Getting a little bit better at creating a CRUD app with an api via the videos and coding along was great. Still a long way to go in fully understanding everything, but it's super cool to improve each week.
